P1

Practical 1: Import Legacy Data into Power BI (Step-by-Step)

Step 1: Open Power BI

1. Click **Start Menu**
2. Search **Power BI Desktop**
3. Open **Power BI Desktop**

You will see the **Power BI home screen**.

Step 2: Import Excel File

1. Click **Home** tab (top menu).
2. Click **Get Data**.
3. Select **Excel**.

Now a **file explorer window** will open.

Step 3: Select the Excel File

1. Go to the location where **Products.xlsx** is saved.
2. Select **Products.xlsx**.
3. Click **Open**.

Step 4: Navigator Window

A **Navigator window** will appear.

1. You will see **Products** table.
2. Tick the **Products checkbox**.
3. Click **Edit**.

This opens **Power Query Editor**.

Step 5: Check the Data in Query Editor

You will see columns like:

| ProductID | ProductName | QuantityPerUnit | UnitsInStock |

Just verify that the data is correct.

Step 6: Change Data Type (Important Step)

1. Click **UnitsInStock column**.
2. Go to **Home → Data Type**.
3. Select **Whole Number**.

This ensures the stock values are numbers.

Step 7: Remove Other Columns (Optional but in manual)

1. Select these columns:
    - ProductID
    - ProductName
    - QuantityPerUnit
    - UnitsInStock
2. Right click → **Remove Other Columns**.

Step 8: Load Data

1. Click **Home**.
2. Click **Close & Load**.

Now the data is **loaded into Power BI**.

Step 9: Verify Data

On the **right side (Fields panel)** you will see:

Products

Expand it and check the columns.

Your data is now successfully imported.
